

ITTA_Database_Transformation_2024

Executive Summary

Synthetic historical ITTA draft for enterprise scenario: Database consolidation and backup strategy.

Cloud Tower

Current State: Legacy environment affecting cloud operations.

Risks: Operational inefficiencies and compliance concerns in cloud.

Recommendations: Enterprise best practices for cloud modernization, governance, resilience, and optimization.

Target State: Standardized, scalable and secure enterprise architecture.

Security Tower

Current State: Legacy environment affecting security operations.

Risks: Operational inefficiencies and compliance concerns in security.

Recommendations: Enterprise best practices for security modernization, governance, resilience, and optimization.

Target State: Standardized, scalable and secure enterprise architecture.

Infrastructure Tower

Current State: Legacy environment affecting infrastructure operations.

Risks: Operational inefficiencies and compliance concerns in infrastructure.

Recommendations: Enterprise best practices for infrastructure modernization, governance, resilience, and optimization.

Target State: Standardized, scalable and secure enterprise architecture.

Network Tower

Current State: Legacy environment affecting network operations.

Risks: Operational inefficiencies and compliance concerns in network.

Recommendations: Enterprise best practices for network modernization, governance, resilience, and optimization.

Target State: Standardized, scalable and secure enterprise architecture.

Applications Tower

Current State: Legacy environment affecting applications operations.

Risks: Operational inefficiencies and compliance concerns in applications.

Recommendations: Enterprise best practices for applications modernization, governance, resilience, and optimization.

Target State: Standardized, scalable and secure enterprise architecture.

Database Tower

Current State: Legacy environment affecting database operations.

Risks: Operational inefficiencies and compliance concerns in database.

Recommendations: Enterprise best practices for database modernization, governance, resilience, and optimization.

Target State: Standardized, scalable and secure enterprise architecture.

Monitoring Tower

Current State: Legacy environment affecting monitoring operations.

Risks: Operational inefficiencies and compliance concerns in monitoring.

Recommendations: Enterprise best practices for monitoring modernization, governance, resilience, and optimization.

Target State: Standardized, scalable and secure enterprise architecture.
